

Business management policy

Carbomax processes, stocks and delivers carbon products and alloys to the metallurgical industry in Northern Europe and also recycles wastes generated in the industry.

Our largest impacts on the external environment are particles and dust from the operations that can be spread to air and water, as well as gases from processes and transports. The working environment is primarily affected by dust and noise.

We continuously and systematically examine and evaluate the quality factors and the influence on the external and internal environment and take into account environmental legislation and other requirements in all our decisions.

That gives us the basis for our efforts to enhance customer satisfaction, improve safety and reduce environmental impact and prevent generation of pollution. Constant improvement of the business consolidates Carbomax's aim to be a good workplace for our employees, a role model in the region and an obvious choice for customers.

Business idea

Carbomax produces, stocks, and delivers the optimal coal products and alloys right on scheduled time to the metallurgical industry in Northern Europe. We assist our customers when recycling the waste generated in the industry to limit the impact of the environment and to fill the need of raw material.

Vision

Carbomax's products and services shall contribute to create a sustainable and competitive metallurgical industry in Northern Europe.
